

STROOM MASTER

Dirty Electricity Filter

USER MANUAL

HOW TO USE

1

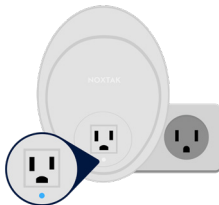

Just plug it into the electrical outlet or a power strip.

2

Stroom Master has a built-in electrical outlet, so you can still connect any electronic device.

3

Check the blue light, that indicates when the filter is receiving electricity.

Stroom Master is an electronic device designed to filter EMF pollution generated by voltage transients, interferences, and harmonics present in power lines (dirty electricity or electrical noise).

Different to other dirty electricity filters, Stroom Master comes with a new and innovating technology known as SPIRO[®], a nanomagnetic compound material that minimizes harmful effects caused by EMF and microwaves exposure without blocking any wireless signal.

By installing the appropriate number of filters in your home, dirty electricity is removed, and the harmful effects caused by EMF and microwaves exposure are minimized without blocking any wireless signal.

Option #1

According to our studies and measurements done in different environments, for an average household we have estimated the following rules for placing our Stroom Master solution:

1 Stroom Master every 194 ft² (18 m²).

For example, a home with an area of 970 ft² (90 m²) should install 5 Stroom Master.

Option #2 (Installation by area)

- 1 Stroom Master on each area of the house (For example: Kitchen, Family Room, Living Room, Media Room, Home Office, Bedroom, Dining Room, Laundry Room, Bathroom, Basement).
- 1 Stroom Master where the Wi-Fi Router is located.
- 1 Stroom Master where the Microwave is located.

USE RECOMMEDATIONS

1. Just plug it into the electrical outlet or a power strip.
2. Check the blue light, that indicates when the filter is receiving electricity.
3. Stroom Master has a build in electrical outlet, so you will still be able to plug in any electronic devices.
4. **IMPORTANT.** After unplugging the Stroom Master the blue light will stay “on” for a couple of seconds, when all the electricity is drained from the Stroom Master the light will turn “off”. Don’t touch the metal connections while the blue light is “on”.

With an EMI meter (electromagnetic interference meter) you can easily measure how high the pollution is in your wiring and apply the necessary of Stroom Master filters to lower the Dirty Electricity and EMF pollution to safer levels.

TERMS AND CONDITIONS

Our product Stroom Master:

The present terms and conditions of use of this product are intended to establish the correct implementation of Stroom Master, product designed and developed by **NOXTAK** and third parties with which this company has manufacturing agreements also, other confidentiality agreements.

Stroom Master, is a product under the standard of **NOXTAK** who have the backing of the UL certification (**UNDER WRITER LABORATORIES**).

This standard highlights the benefit of dirty electricity mitigation, Electro-Magnetic Interference, Radio Frequency Interference, as well as being a coadjutant of wireless signal optimization and energy saving.

- This product is not part of a personal or corporate savings program.
- This product should only be used as **IS DESCRIBED IN THE PACKAGING OR AT WWW.NOXTAK.COM**.
- This product is not part of a treatment against any cancer or preexisting illness in the consumer.
- This product has a warranty period of 3 years from your purchase.
- This product **MUST NOT BE USED FOR A VOLTAGE DIFFERENT FROM THE SPECIFIED ONE.**
- **THIS PRODUCT SHOULD NOT BE USED NEAR WATER, NEITHER SUBMERGED.**
- This product should not be opened if a malfunction is present or suspected.
- This product **SHOULD NOT BE APPROACHED TO FIRE.**
- Children should not handle this product without the supervision of their representatives.
- This product has a patent, registration of intellectual and industrial property.

DATA SHEET

Input	AC 100V to 240V~ 15A
Output power	3.3 kW
Output	AC 110V to 240V ~ 15A
Watt loss	0.02%
Effective power	99.8%
Frequency	50 ~60 Hz
Range	0 Hz to 8 GHz
Radius of Influence SPIRO®	7.87 ft. /2.4 meters
Frequency Range	0 Hz a 3×10^{12} Hz (300 GHz)
Maximum Power Density	1.50 mW/m ²
